

Protein as supplied: $T_m = 48.61(+/-1.39)$

Lysozyme Control: Passed

No Dye Control: Passed

No Protein Control: Passed

Full interpretation of the results requires you to look at the individual melt curves.

The summary graph appears to be unreliable

21% of curves were used in T_m estimations

Average estimation of error is **1.0 C**

Protein as supplied is **not well behaved**
